Raptor Series Front Load Hose Reel

Standard Features:
*Raptor 10 =10 sections 6” hose, Raptor 16=16 sections 6” hose, Raptor 20=20 sections 6” hose, other models coming soon.
*Heavy duty frame
*Tandem Axle with optional floatation tires
*Pivoting hitch pushes cart to side of tractor duals allowing to roll hose from the front with level wind.
*Single direct drive hydraulic motors with Slewing Ring eliminating the chain or gearbox
*Capable of operating entire cart off one hydraulic remote
*Lay out hose off rear of cart up to 10 MPH with spool under hydraulic power

Hose Cart hydraulically swings to either side of the tractor getting the entire spool outside the duals allowing the hose to be rolled from the front. This makes rolling a lot easier because the driver can see what is going on, they can pull ahead as the hose couplers come through the level wind reducing the tension on the hose and reducing hose damage. The operator can also drive ahead instead of backing up in those places difficult to roll hose and maneuvering!

Prototype Shown! Production models will have some slight changes! Not all option shown are standard! Patents Pending!
Standard single 2 speed hydraulic motor with Slewing Ring eliminates a gear box or chain. This system is easily maintained. Step up to the optional dual 2 speed hydraulic drive and decrease both your roll up and lay out times!

Optional Ditch Arm allows you to lay hose direct in the ditch off either side of the cart reducing man power and saving you lots of setup time!

Optional electric remote valve lets you run the entire cart from 1 or 2 tractor remotes. The kit includes a remote control in the cab so the operator can switch between functions while on the go and not interrupting other running functions!
